Project Concept

1 Player Control

You control a *Astronaut* in this *Front view* game

where *Arrow keys* makes the player *Left and right*

2 Basic Gameplay

During the game, *platforms* appear from *The top of the screen*

and the goal of the game is to *Get as much height as possible*

3 Sound & Effects

There will be sound effects *When bouncing off of a platform* and particle effects *none*

[*optional*] There will also be *A different bouncing sound when interacting with a super platform*

4 Gameplay Mechanics

As the game progresses, *The amount of platforms decreases* making it *Harder to find a way up*

[*optional*] There will also be

5 User Interface

The *score* will *increases* whenever *The player goes higher*

At the start of the game, the title *Best education bounce!* will appear and the game will end when *The players falls out of the screen*

6 Other Features

There will be 2 types of platforms. The game takes place in a space-like world with stars in the background, which fit the logo theme.

	The astronaut has animations when moving and bouncing.

Project Timeline

Milestone	Description	Due
#1	- *Create the MainMenu and Game scenes (Death screen, restart button, welcome screen)* - *Create the player and platform prefabs (Logo for player and astroid for platform)*	*03/24*
#2	- *Create GameManager script (score tracking, game over tracking)* - *Create PlayerController script (input listener, applies forces, checks if player is out of screen)* - *Create PlatformSpawner script (spawns platforms, tracks the current amount of platforms on screen and the highest current platform + if the platform is a boosted platform or not)* - *Create CameraFollower script* - *Create UIManager script*	*03/30*
#3	- *Add bounce sound effects*	*03/31*
#4		*mm/dd*
#5		*mm/dd*
Backlog		*mm/dd*
